

## INTRODUCTION TO PROJECT

Website is one of the sources, where people can get information related to any subject. As there is no such more website of “Tanishka Art Gallery.”, so to introduce about the field and its features to all people, the website is designed. Publishing customer’s information with good representation over the web is the main objective. Project aim is to design a website on “Tanishka Art Gallery” -provides full detailed information about Tanishka Art Gallery.

The World Wide Web (WWW or web) can be considered as a large distributed information system that provides access to shared objects. It is currently one of the most popular applications running on the Internet and its usage is expected to grow further in future. We also develop a website which is Tanishka Art Gallery. Our website provides arts on order of home delivery .To develop our website we use HTML.

## TECHNOLOGY

### **A)HTML**

HTML is a **hyper text markup language**. The word *markup* was used by editors who *marked up* manuscripts (usually with a blue pencil) when giving instructions for revisions. "Markup" now means something slightly different: a language with specific syntax that instructs a Web browser how to display a page.

Once again, HTML separates "content" (words, images, audio, video, and so on) from "presentation" (instructions for displaying each type of content). HTML uses a pre-defined set of elements to define content types. Elements contain one or more "tags" that contain or express content. Tags are enclosed by angle brackets, and the closing tag begins with a forward slash.

Tim Berners-Lee, physicist at CERN (the European Organization for Nuclear Research), devised a way in the late 1980s for scientists to share documents over the Internet. Before that, Internet communication had been limited to plain text, using technologies such as email, FTP (File Transfer Protocol), and Usenet-based discussion boards. HTML used a content model stored on a central server but transferrable to a local workstation and viewable in a browser, simplifying access to content and making "rich" content possible (such as sophisticated text formatting and images). HTML is derived from SGML, which is a complex syntax for marking up or binding of content (text or graphics) in documents; as of HTML5, HTML no longer attempts to adhere to SGML syntax.

### **B)JavaScript**

JavaScript only execute on the page(s) that are on your browser window at any set time. When the user stops viewing that page, any scripts that were running on it are immediately stopped. The only exceptions are cookies or various client side storage APIs, which can be used by many pages to store and pass information between them, even after the pages have been closed.

JavaScript is a programming language that can be included on web pages to make them more interactive. You can use it to check or modify the contents of forms, change

images, open new windows and write dynamic page content. You can even use it with CSS to make DHTML (Dynamic Hyper Text Markup Language).

JavaScript is a client side, interpreted, object oriented, high level scripting language, while Java is a client side, compiled, object oriented high level language. Now after that mouthful, here's what it

### **C) CSS**

CSS stands for Cascading Style Sheets. CSS describes how HTML elements are to be displayed on screen, paper or in to other media. CSS saves a lot of work. It can control the layout of multiple web pages all at ones. External style sheets are stored in CSS files. CSS is a style sheet used to define styles for your web pages.

The most common way to add styling is to keep the style in separate CSS files. CSS is a style sheet language used for describing the presentation of the document written in markup language. CSS describes how elements must be rendered on screen, on paper, on in other media. The style defines are normally saved in external.css files.

## EXISTING SYSTEM

Virtually any medium can be used for advertising. An old website in the information is not sufficient to user. The record of the daily routing registered in the manual form. But it is the very time consuming process. Information in the register is presented not for large amount.

To prepare the menus of arts which is used in the conducting will take more time, currently it is doing as a one day process for verifying all records. So after conducting the feasibility study we decided to make the manual Tanishka Art Gallery to be computerized. Any place an "identified" pays to deliver their message through a medium is advertising. Virtually any medium can be used for advertising whole people used in internet.

### **.Disadvantages of Existing System-**

1. Lack of communication between buyer & seller.
2. Manual search for product in store or anywhere.
3. Fail in tracking of product.
4. Current system is very time consuming

## NEED AND SCOPE

### **Need of the website:**

In previous days the people use to go to near by Tanishka Art Gallery and get information about the Tanishka Art Gallery

This website is published mainly keeping in mind of user. When users access this website he will find all information about Art Gallery and its updates. Another main aim of this project is to save the time of the people because in modern day world they don't have time to go to nearby Art Gallery and gather information about the Art Gallery. We provide all information about features, services etc

### **1. Online brochure:**

Companies spent millions creating brochures & distributing them. By having a website you can skip that entirely.

### **2. More customers:**

More than 2.4 billion people use the internet every day, and some 90% of those have purchased something. So you can get more customer.

### **3. Marketing:**

The internet has opened up a whole world of marketing that didn't exist before.

### **Scope of the website:**

At Art Gallery, we dream big. Our future plans, therefore, cover almost every area of our existence.

The other areas of future focus are our product range and geographical reach. We have concrete plans of bringing in various new products into the market in near future. In addition, we are expanding our network and exploring new geographical areas.

## PROPOSED SYSTEM

The Proposed system is web based application. The computerized system records all information. This system is used by internet. All information is given through proposed system. In this project the user can give the feedback to the system. Our system gets the information about various arts which is used in conducting people.

### **Advantages of Proposed system-**

1. User can choose best option for get knowledge.
2. The user can give the feedback to the system.
3. The information is available to be accessed by anyone, anywhere, anytime.
4. The information within a site can be quickly accessed.
5. The site can be updated to always provide the latest information

### **Limitations of Proposed System-**

1. Viewing problem -

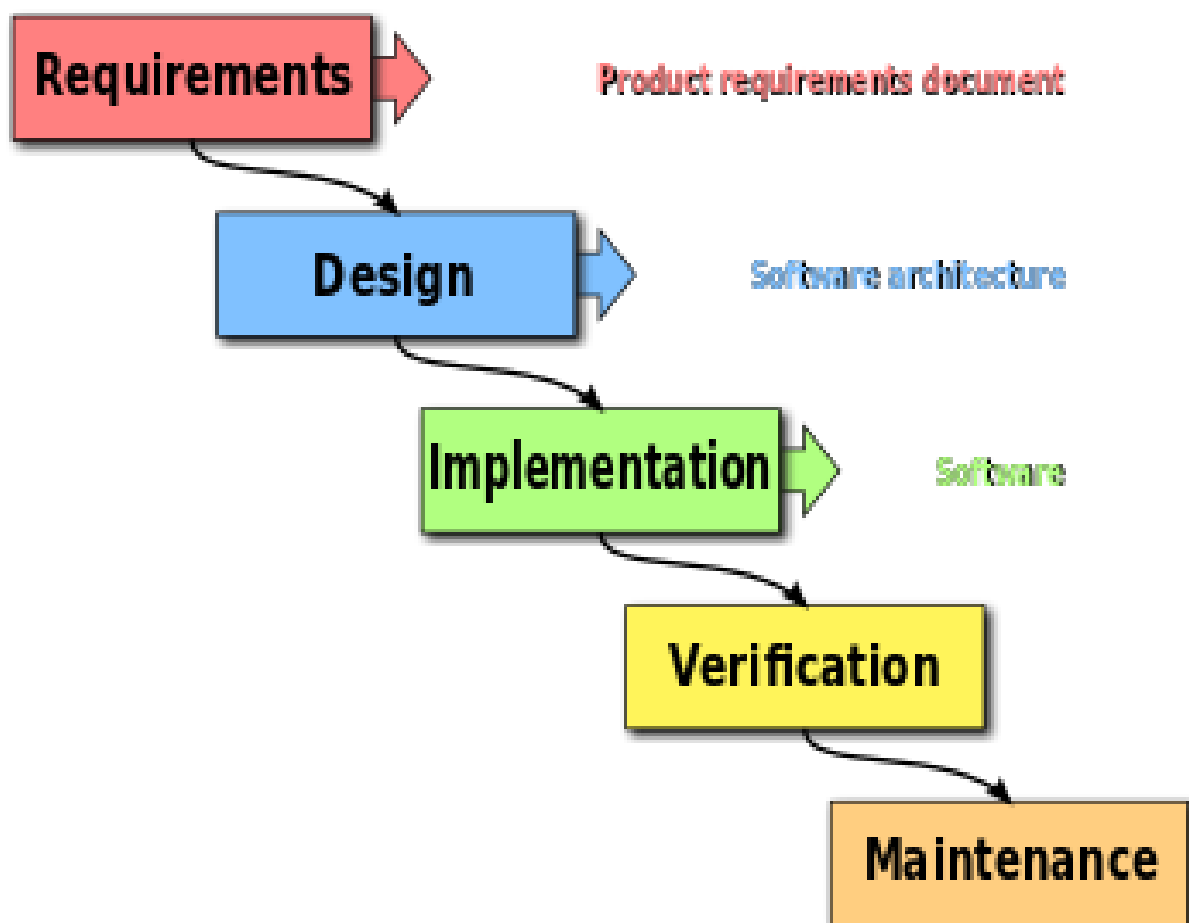

When technical issues occur system loss the opportunity to broadcast advertisements for their services .

2. Do not cover all the types that should be present for Art gallery
3. Threat to security level.

## REQUIREMENT GATHERING

### Waterfall Model design:

Waterfall approach was first SDLC Model to be used widely in Software Engineering to ensure success of the project. In "The Waterfall" approach, the whole process of software development is divided into separate phases. In Waterfall model, typically, the outcome of one phase acts as the input for the next phase sequentially.

**The sequential phases in Waterfall model are:**

- **Requirement Gathering and analysis:** All possible requirements of the system to be developed are captured in this phase and documented in a requirement specification doc.
- **System Design:** The requirement specifications from first phase are studied in this phase and system design is prepared. System Design helps in specifying hardware and system requirements and also helps in defining overall system architecture.
- **Implementation:** With inputs from system design, the system is first developed in small programs called units, which are integrated in the next phase. Each unit is developed and tested for its functionality which is referred to as Unit Testing.
- **Integration and Testing:** All the units developed in the implementation phase are integrated into a system after testing of each unit. Post integration the entire system is tested for any faults and failures.
- **Deployment of system:** Once the functional and non-functional testing is done, the product is deployed in the customer environment or released into the market.
- **Maintenance:** There are some issues which come up in the client environment. To fix those issues patches are released. Also to enhance the product some better versions are released. Maintenance is done to deliver these changes in the customer environment.

## SYSTEM ANALYSIS

### **S I T E - M A P**

## SYSTEM DESIGN

### Database Design:-

#### Feedback:

Field Name	Data Type	Constraints	Description
USERNAME	Text	Primary Key	Name of the user
ADDRESS	VARCHAR	Not Null	Name of the state
CONTACT	NUMBER	Unique	Contact of the user
EMAIL ID	VARCHAR	Check	Email id of the user
DESCRIBE	Text	Not Null	Good,very good,bad

#### Order Form:-

Field Name	Data Type	Constraints	Description
USERNAME	Text	Primary Key	Name of the user
EMAIL ID	VARCHAR	Check	Email id of the user
PASSWORD	NUMBER	Unique	Password of the user
CONTACT NO	NUMBER	Check	Contact of the user
CURRENT ADDRESS	Text	Not Null	Current address of user
PAINTING TYPE	Text	Not Null	Name of the painting
PRICE	NUMBER	Unique	Price of the painting

### Input design:-

#### Home page:

```

</body></html>

## IMPLEMENTATION

### ➤ **System Requirement:-**

#### **Hardware:-**

- Monitor
- RAM=256MB
- Key board
- Mouse
- Hard disk=500GB
- CPU

#### **Software:-**

- Internet Explorer
- Google chrome

## USER GUIDELINE

When we open a website following menus are shown in every page of our web page:-

- Home
- About us
- Contact Us
- Food Menus
- Feedback

### 1. Home :-

This is our main web page. Here we display detail information about Art Gallery online You can go home page on clicking home menu.

### 2. About Us:-

In about us page, we are display information about our mission, vision, infrastructure & quality. You can go about us page on clicking about us menu.

### 3. Contact Us:-

In contact page we can display information about the Name, Phone no, . You can go Contact us page on clicking Contact us menu.

### 4. Food Menus:-

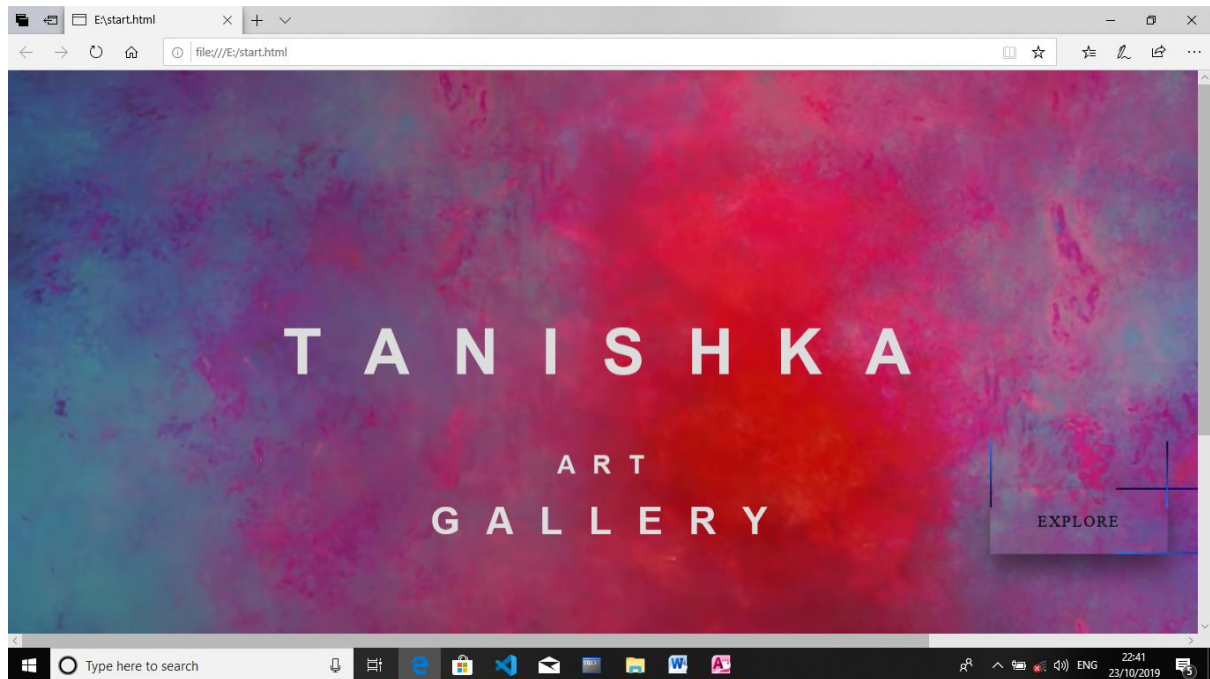

In food menu page we can display food menus which we provides to Customer

### 5. Feedback :-

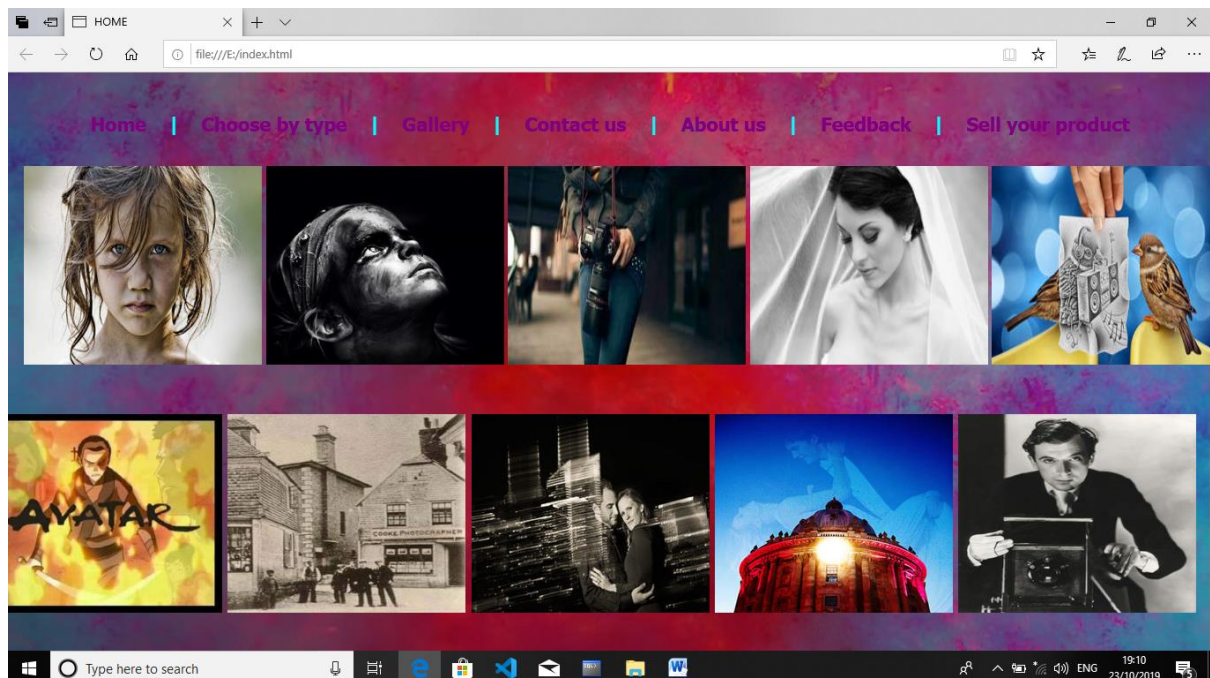

Feedback page in this website.

## OUTPUT

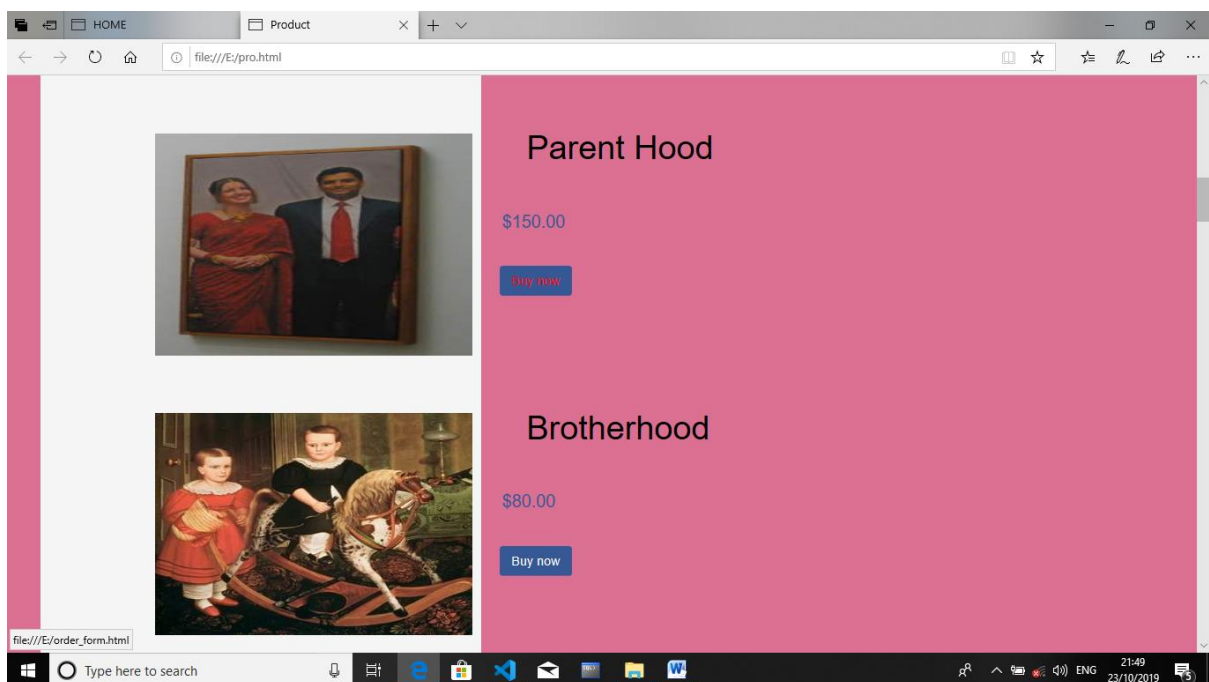

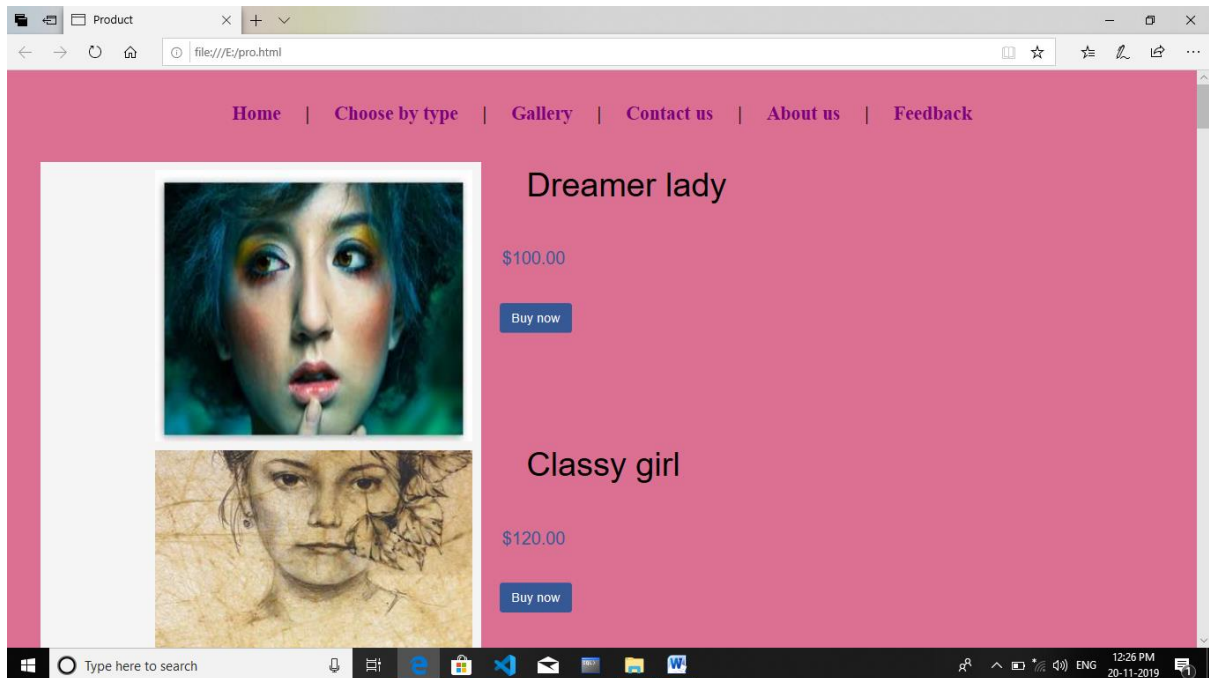

### 1.START:

### 2.HOME

### 3.CHOOSE BY TYPE:

**AFTER CLICKING ON BUY NOW:**

Order Form

User Name:

Email ID:

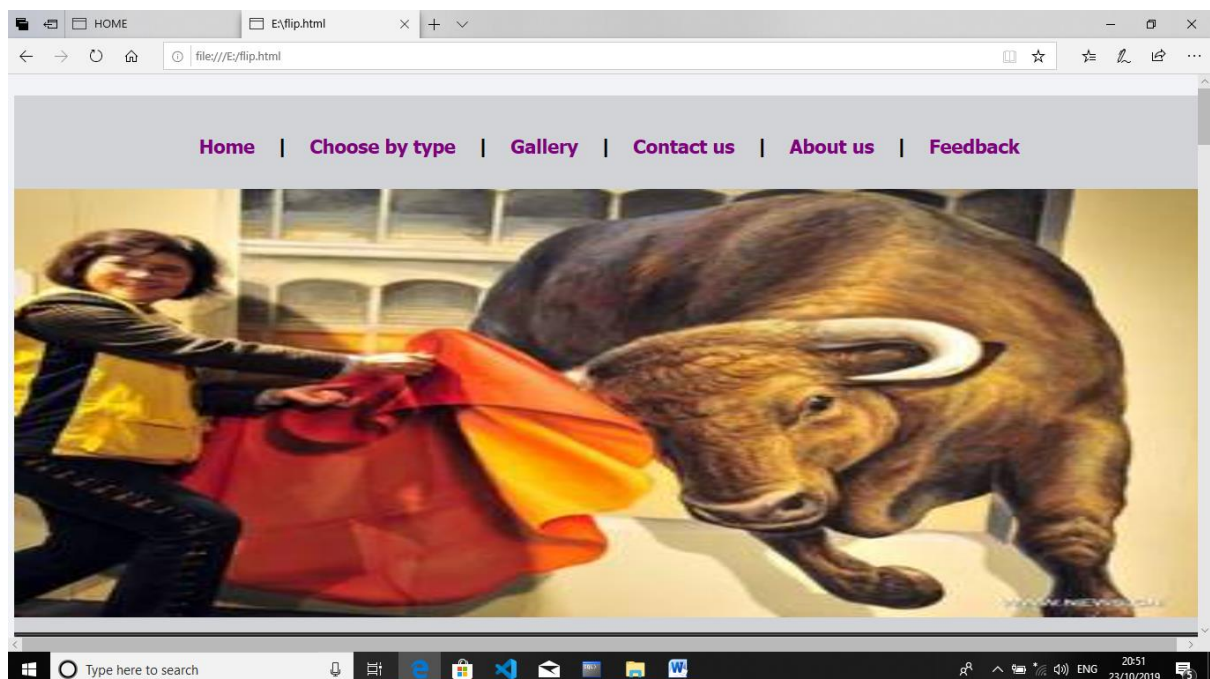

Password:

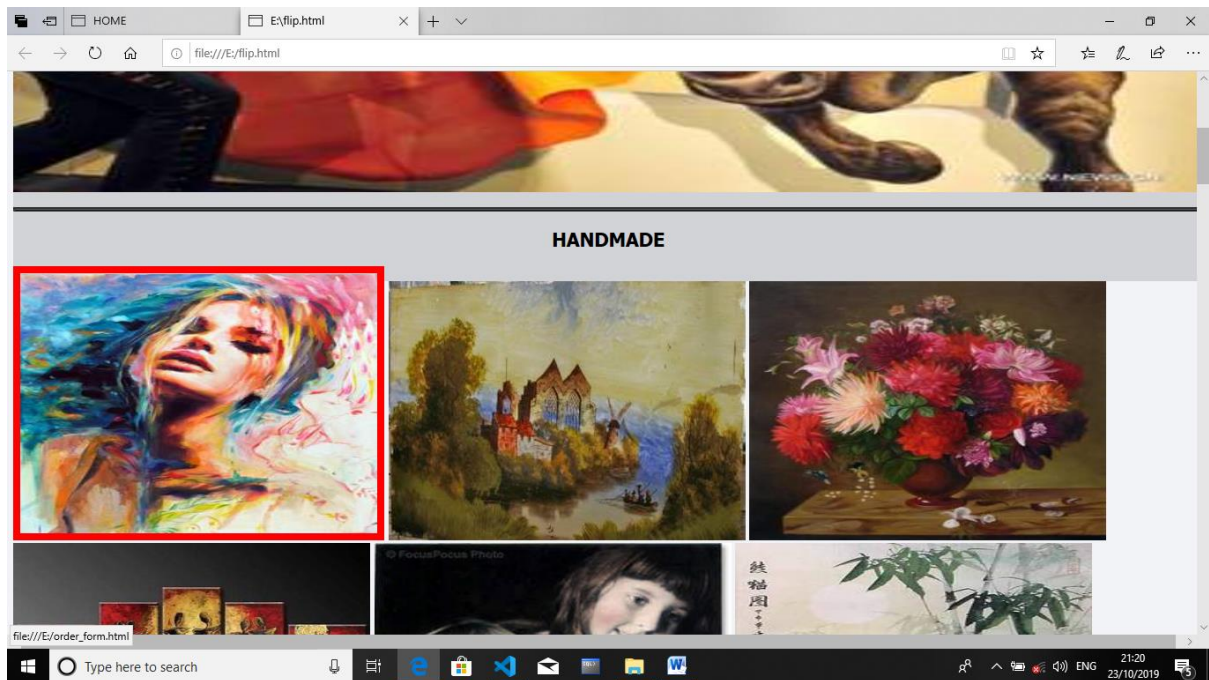

Contact No.:

Current Address:

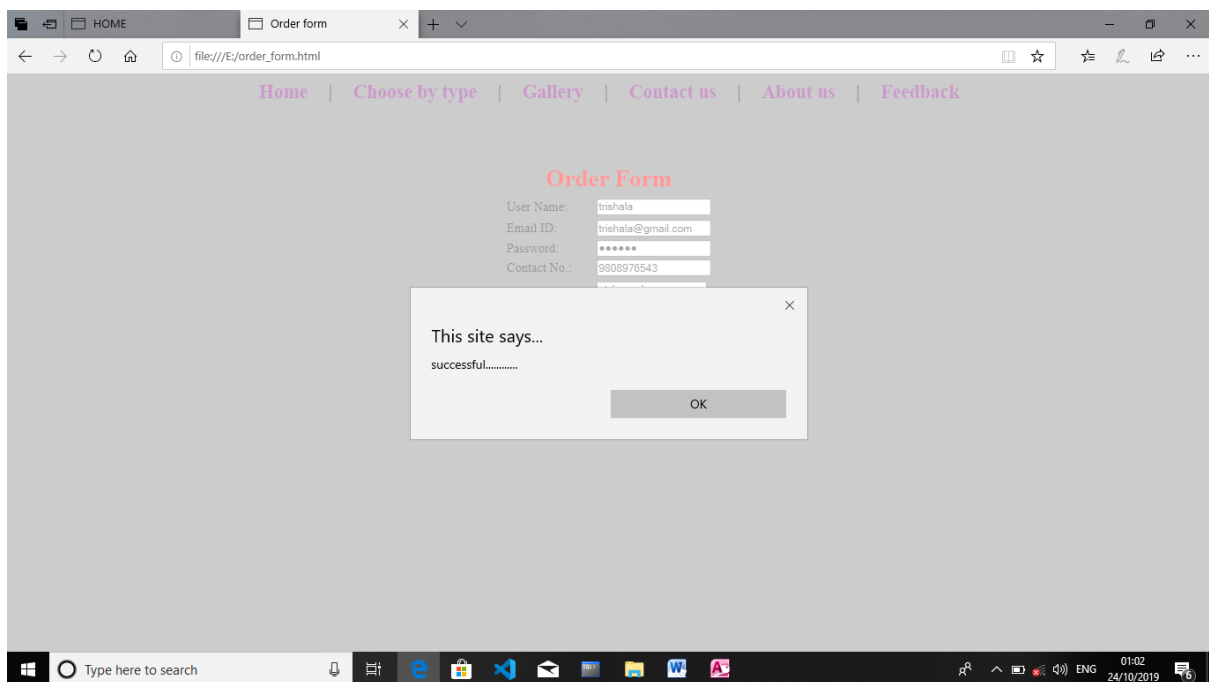

Painting Type:

**4.Gallery:**

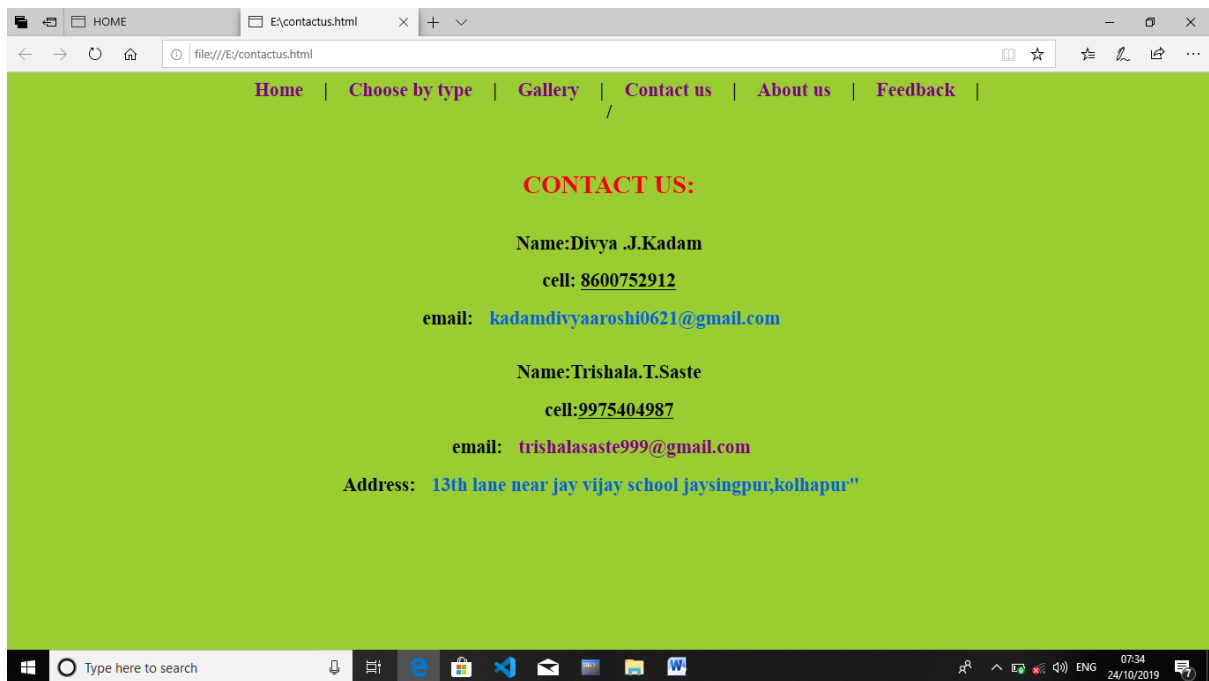

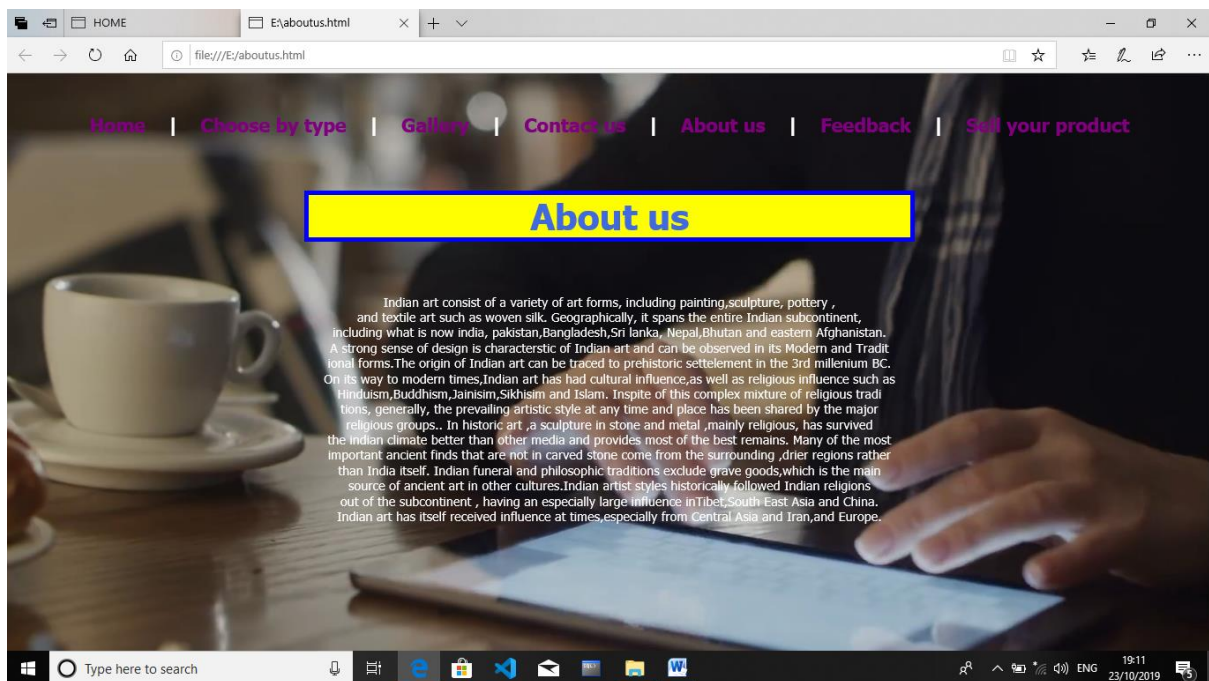

**AFTER CLICKING ON IMAGE:**

## 5.CONTACT US

## 6.ABOUT US:

## 7.FEEDBACK:

A screenshot of a web browser displaying the 'Feedback form' page. The browser's address bar shows 'file:///E:/feedback.html'. The page has a navigation bar with links: Home | Choose by type | Gallery | Contact us | About us | Feedback. The main content area features a background image of bicycles on a cobblestone street. Overlaid on this is a 'FEEDBACK FORM' with the following fields: USERNAME, ADDRESS, CONTACT, EMAIL, and DESCRIBE, each in a white rounded rectangle. Below these fields is an orange 'SUBMIT' button. The Windows taskbar at the bottom shows the search bar and various application icons. The system clock indicates 20:53 on 23/10/2019.

A screenshot of the same 'Feedback form' page, but with a modal dialog box open in the center. The dialog box has a title 'This site says...' and a message 'Data added successfully.....'. Below the message is an 'OK' button. The background form fields are still visible but slightly faded. The Windows taskbar at the bottom shows the same application icons, and the system clock indicates 00:42 on 24/10/2019.

## Order Form:-

## CONCLUSION

The present computerized system “Tanishka Art Gallery” is helpful for creating up to website through”Tanishka Art Gallery” information details. Through this information, user can easily choose the information about .Online art gallery gives variety of arts. User can choose best option for get knowledge. The project includes all the information & description of the Tanishka Art Gallery.

As you can see, there are many possibilities for creating a website for yourself or someone else. No matter what your reason might be for creating a site, the objectives are essentially the same to share information and offer products, services.

The system satisfies most of its objectives like.

- It perform desired task with speed and accuracy.
- It helps in managing the data in a much better way.
- It helps in retrieving information more easily to many different users.
- It provides more information to user with in short period.

## FUTURE ENHANCEMENT

There are several important features we would like to add to this website. We have created this list to help us track improvements as well as share with the general public our goals for this project. We welcome your suggestions, and if you have a good idea, please 'Contact Us' using our contact number, submission from and choose "Website Feedback" from the list of categories

In future is a some extra features are added like selling arts on website and new module of the feedback of this page. this will be very beneficial to the system & also for the customer. we can use attractive arts in future.
